## MT#5 Quill Tail Stock

The L-Y series is fitted with tailstocks as a standard for excellent machining quality. In addition, the travel distance of quill can be as long as 120mm(4.7"), thus expanding the support area.

(NC tail stock can be moved separately, providing convenience during workpiece setup. : Option)

# REDUCTION OF NON-CUTTING TIME BY FAST RAPID SPEED

## ALL-IN-ONE TYPE OF BED

### High Precision & Rigidity, One-Piece Structure

Designed with FEM(Finite Element Method) analysis, the L500 Series has bed structure of 30° slope to improve machining accuracy and cutting ability. In addition, increased bed installation area improves vibration absorption and machining stability.

## GUIDEWAY

### Box Guideway

All axes of L-Y Series are designed with Box Guideways for better travel ability. Box Guideways show great performance in offsetting vibrations caused by heavy duty cutting.

### Ball Screw

Large diameter ball screws with preloading prevent deformation due to heat. Also double-anchor support method improves rigidity.

### Rapid Traverse Rate (X/Y/Z)

# HEAVY DUTY CUTTING & HIGH ACCURACY

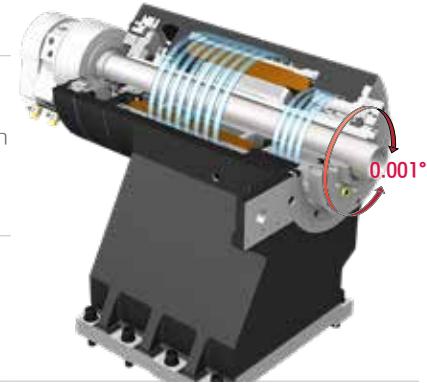

## SPINDLE

### Built-In Main Spindle

Built-in type spindle reduces noise, heat and vibration effectively at high speed rates. Also, rapid acc./deceleration reduces non-cutting time leading to higher productivity..

### C-Axis Control

C-axis of L-Y Series can be controlled to 0.001° which makes it possible to process various shapes.

### Built-In Sub Spindle ('S' Type)

The "S" Type built-in sub-spindle has 6" sub-chuck, which enlarges the machining area and improves the workability of the sub spindle with the C-axis control.

When the main spindle cutting is completed, the sub spindle rotation is synchronized with the main spindle allowing the workpiece to be transferred to the sub spindle, and machining can begin on the back side of the workpiece.

## BELT TYPE MAIN SPINDLE

**OPTION**

Belt type main spindle has a wide torque range and it is designed to minimize thermal displacement. This enables accurate machining during high speed constant processing.

The belt-type sub spindle with 6" chuck is designed to minimize thermal displacement during long duration continuous machining and from heavy-duty cutting to high-speed processing.

# VARIOUS DRIVEN PRECISION BMT TOOL HOLDERS

## TURRET

### BMT65 Turret

The BMT turret secures the tool with four bolts and key on the tool mounting surface of the turret, making it possible to powerfully fix the tool, ensuring high reliability in rigidity and precision.

### Mill Tool Holder

Machining capability has increased with the addition of straight milling head tool holder, which can machine workpieces from the side, and angular milling head tool holder, which can perform I.D. operations.

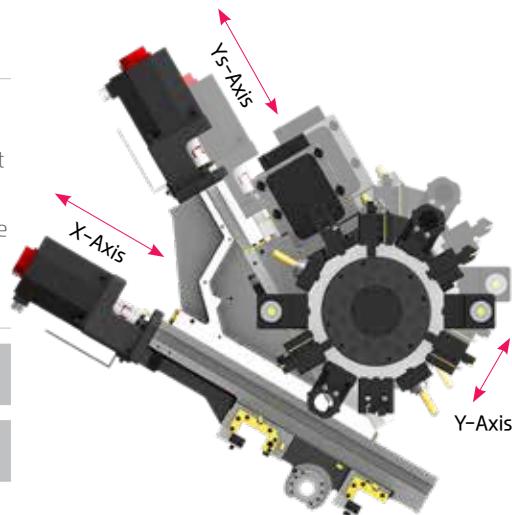

## Y-AXIS

### Wedge Type Y-Axis Structure

The HD-SY Series is designed with a wedge type Y-axis that is transferred by the simultaneous operation of the Ys-axis and the X-axis. In addition, excellent rigidity makes it possible to perform superb quality when machining a heavy-duty cutting.

Y-axis Rapid Traverse Rate : 10 m/min

Y-axis Travel : 120 {±60} mm (4.7" {±2.4"})

### Special Tool

### OPTION

With the Y-axis, the L-Y series can process high value-added products using a variety of rotating tools. In particular, there is a multi-holder for attaching a variety of tools to one holder, and an eccentric rotary tool for handling eccentric parts without additional axis travel, which can realize integration of process with one machine.
